Abstract: With the rapid development of economy of our country, social justice has increasingly become the concern of national leaders and people at all levels. At the same time, the rapid development of the Internet has also played a certain chemical reaction with social justice. This article will use SPSS software to analyze 2013 valid questionnaires data from some local universities in Hubei Province, and carefully understand the relationship between the network and social justice, and the impact of the network on social justice

Keywords: network social justice

Now a days, the influence of network on social life and its justice has formed a modern research field. The various attributes of the Internet age, including timeliness, double-sided, convenience and so on has a very wonderful relationship between network and social justice, in order to understand the relationship, we distributed network and the questionnaire of social justice. Investigating the college students in some local colleges and universities in Hubei, 2658 questionnaires were issued and 2013 of them were effective. With the help of statistical software SPSS, the relationship between network and government affairs is analyzed, so as to understand the influence of network on social justice.

1. The convenience of the network is conducive to promoting the implementation of social justice

According to the statistics of effective questionnaires, 70.3% of the people think that the use of the network will promote the process of social justice implementation. 54.4% of them think that the convenience of the network can make us understand more clearly and promote social justice more quickly .In the implementation of social justice, 57.32% of the proportion tend to the openness of network government affairs, and 34.62% of the proportion of the justice about education is also announced in the network, the proportion of 14.21% believes that the phenomenon of unfair areas can be notified on the internet.

The powerful search function of the network and its unique convenience attributes help us to better understand some of the things which we want to know. We can learn something about what is happening in our society through the Internet, and we are also aware of some of the problems. Not only that, we can also through the network of public affairs, will need to open the project on the network, people can understand the corresponding policy through the network, to avoid black box operation, reduce unnecessary conflicts between the leadership and the masses of the people, to implement to promote social justice.

2. The sharing of network makes social justice get cognitive promotion

The proportion of 68.23% believes that the sharing of network plays an important role in the implementation of social justice. Among them, 43.67 of the proportion believes that the share of the network can facilitate exchanges and discussion between people. The proportion of 34.51% believes that the share of the network is conducive to the supervision and reporting of violations of social justice. The proportion of 29.34% believes that the the benefits of the share of internet is that everyone to express their views, to promote social

justice.

In the basis of the share of the internet, we can learn about the implementation of social justice in all regions, the unfair situation in this area can be discussed and discussed, and what areas can not be done properly can be put forward corresponding suggestions. At the same time, we can also play a role in reporting and monitoring. As the saying goes: everybody gets firewood, the flame is high. Efforts should be made to stop unfair events and create a harmonious society.

3. The network of public opinion leads to social justice misunderstood by everyone

The proportion of 74.3% thinks that the network has a kind of power of public opinion, which will lead to social justice misunderstood by everyone. Among them, 67.51% of the proportion considers that the public opinion force cannot achieve social justice, and this problem need to be solved. The proportion of 20.15% believes that the network of public opinion is a double-edged sword, if it is used properly that will also promotes the implement of social justice.

The main body of public opinion in the network is uncertain, because the network is anybody who cannot be found. At the same time, the formation of network public opinion is rapid, rational thinking is insufficient, easy to emotional, fast spread, easy to ferment, so that the problem cannot be solved fairly, to stimulate social contradictions. Typical examples, such as network violence, is an important manifestation of irrational public opinion on the Internet, a vicious manifestation of extreme public opinion on the Internet, and an extension of social violence on the internet. The resulting "human flesh search" and so on, so that the broad masses of the people do not have too much hope for social justice.

4. The corruption of the network is also a serious problem of the social justice

The proportion of 53.21% believes that today's Internet corruption is very serious. Among them, 42.23% of the proportion thinks that the network management system is not perfect. The proportion of 32.49% believes that there are too many shady nets on the Internet, which is not conducive to the full implementation of social justice, and the proportion of 24.3% believes that the network operation, supervision and implementation level is slightly lacking.

With the advent of the information era, the system is still not fully defined implementation, there are many loopholes, such as the bad information is spread through the network to lead the youth to study bad things, some illegal transactions through the network, is the nature of corruption further deterioration, undermine social harmony, social justice. And some illegal transactions are made through the internet, which is the nature of corruption further deterioration. This will destroy social harmony and influence social justice.

But in recent years, through the network report, ten officials have been accepted by the discipline inspection department for public suspension and investigated. We should against corruption, which is a cancer that endangers human society. It runs counter to the socialist road with Chinese characteristics and fairness and justice.
